DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1 and 2 have been considered but are moot in view of the new grounds of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Challa et al. (Challa), U.S. Patent No. 6,453,181, used in the previous office action

Regarding claim 1, Challa discloses an adaptive method for reducing power consumption in a standby mode of a digital radio communication terminal, comprising the steps of:

calculating the difference of edge timings between a main clock and a low frequency clock (reads on estimated dynamic frequency error compensation factor representative of a difference between the initial frequency and a current dynamic frequency of the slow frequency clock signal) (col. 4, lines 16-35);

Art Unit: 2686

comparing the calculated timing difference with a predetermined difference reference value (reads on fixed frequency drift compensation factor) (see col. 4, lines 24-45); and

upgrading or downgrading a catnap period according to a result of said comparing step (col. 6, lines 10-14).

Regarding claim 2, Challa discloses steps (A) through (C), as applied in claim 1 above. Challa further discloses the following steps: (D) comparing the upgraded or downgraded catnap (i.e., reads on number of cycles in current cat nap) period calculation variable with predetermined maximum and minimum critical values (i.e., reads on predetermined values representative of the length, e.g., length inherently includes a range, i.e., maximum and minimum values) (see col. 6, lines 10-15); and (E) shortening or lengthening the catnap period according to a result of step (D) (i.e., reads on the fact that length of catnap is determined based on predetermined values) (see col. 6, lines 10-15).

Allowable Subject Matter

4. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
